

## GemRack Release Notes - V1.0 Build 1043

The main purpose of this release (on 23-Mar-2020) is to improve the overall program useability and resolve any known bugs.

If you have an active *Support Subscription* we encourage you to install this new release and take advantage of all the latest enhancements and corrections and if you have an expired *Support Subscription* and wish to renew it please contact our office.

This update is available by clicking the pop-up that appears at the bottom of the screen when opening **GemRack** or via the **Menu bar > Help >  Check for Updates** function and following the prompts.

The main changes for this release include:

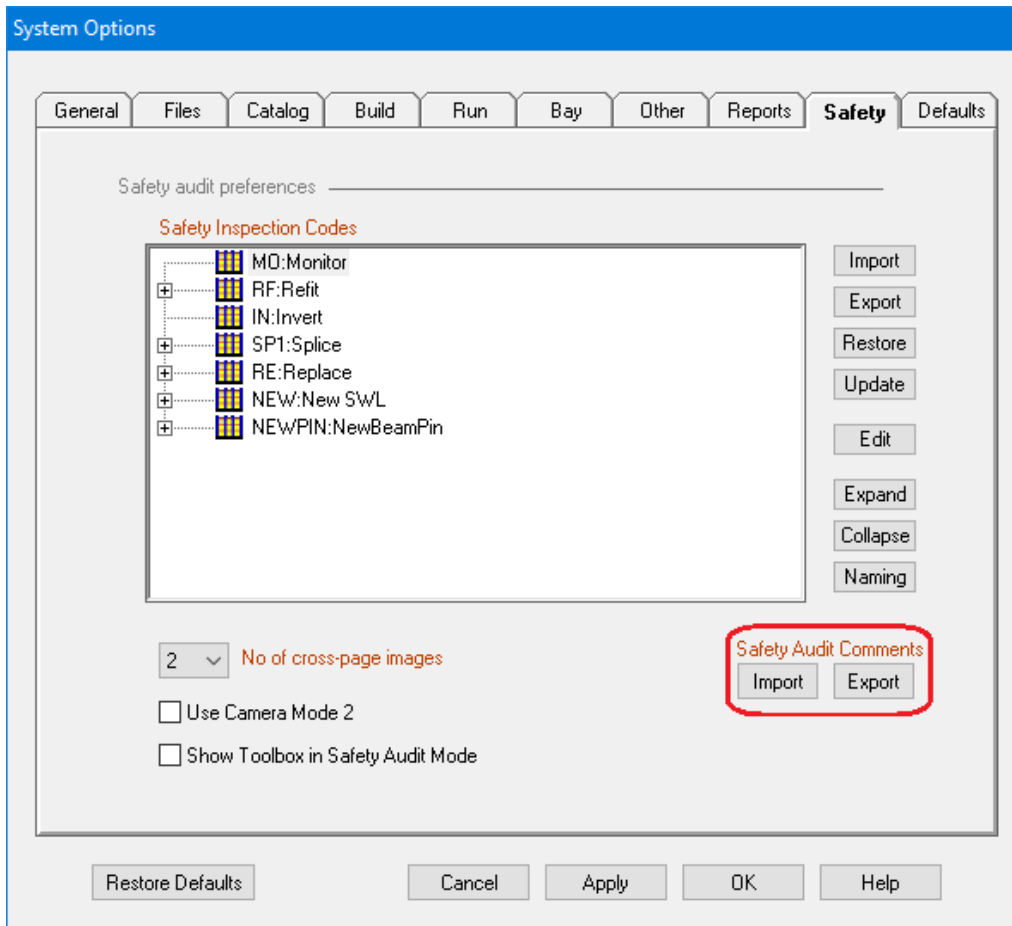

- enhanced current Help menu to include '*Updates History*' menu item,
- implemented feature to import/export *Safety Auditor* dialog comments,
- upgraded 'drivers' used when creating floor plan drawings and PDF documents,
- resolved some issues related to the 'renumber runs' feature
- implemented feature that lets user specify (for new projects) whether to use either the standard default values or the last entered values from *Toolbox* panels,
- resolved an issue of not showing the forklift in floor plan drawings,
- resolved an issue related to the *Safety Inspection Codes Configuration* dialog,
- resolved several issues related to printer driver.

## New Features

1. Enhanced current Help menu to include 'Show Updates History' item that opens a web page with all release history documents such as this one.

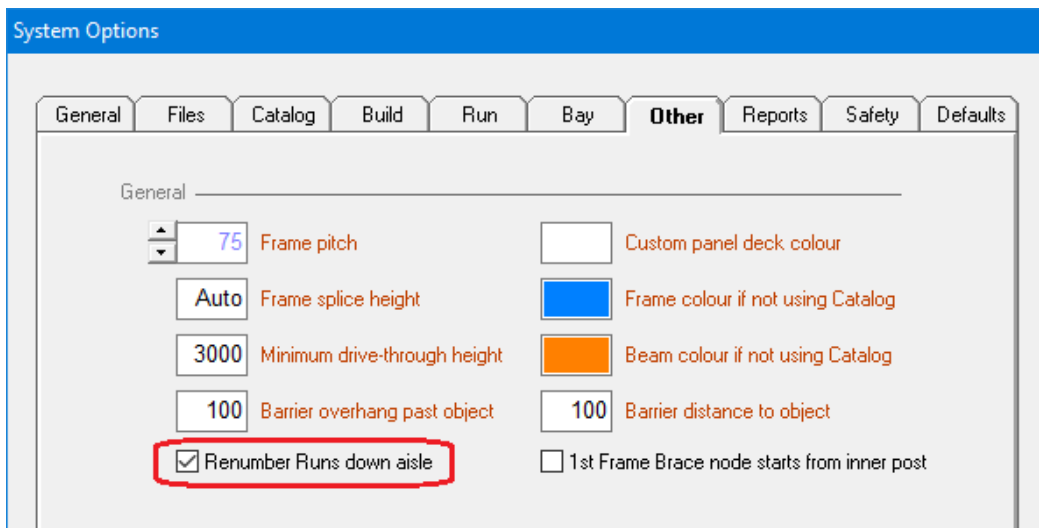

2. Implemented feature to import/export comments used in *Safety Auditor* dialog when recording defects. It is accessible via *System Options > Safety* tab and is intended for distributing/sharing comments between colleagues to achieve more consistent documentation.

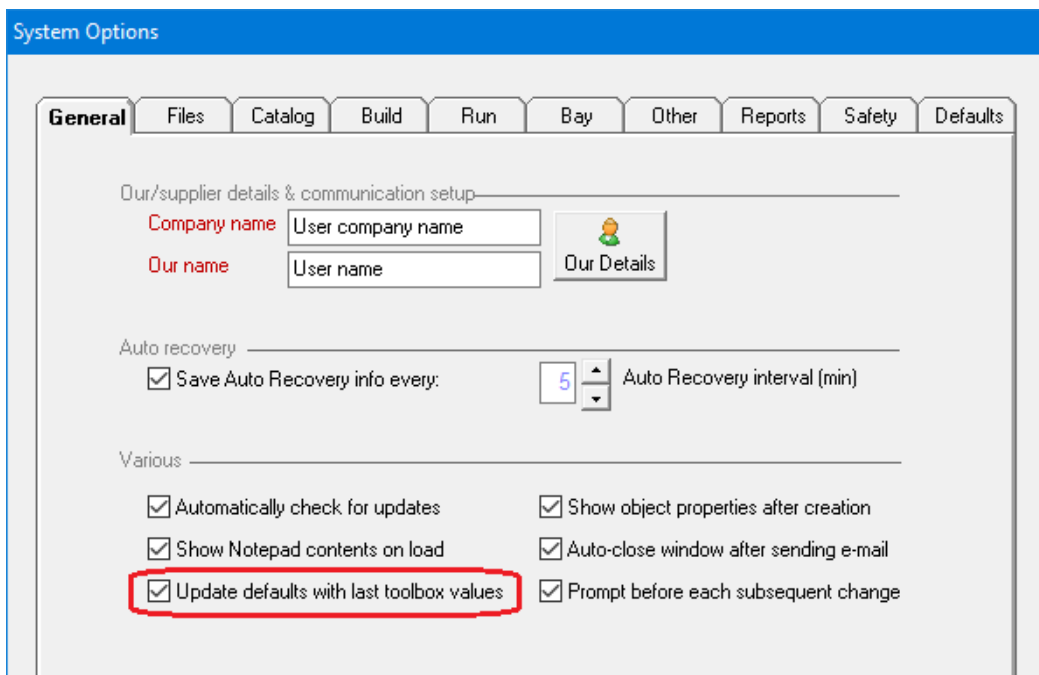

## Enhanced Features & Corrections

1. Upgraded 'drivers' used when creating floor plan drawings to the latest version.
2. Resolved an issue related to user needing to double click a Tier (in *Run View*) many times before the properties dialog is shown.
3. Resolved some issues related to the 'renumber runs' feature so that if the *Renumber Runs down aisle* setting in *System Options > Other* tab is checked then the re-numbering is done as per example (A) below otherwise it is done as per example (B), irrespective if the runs are exactly in line or only partially overlapping.

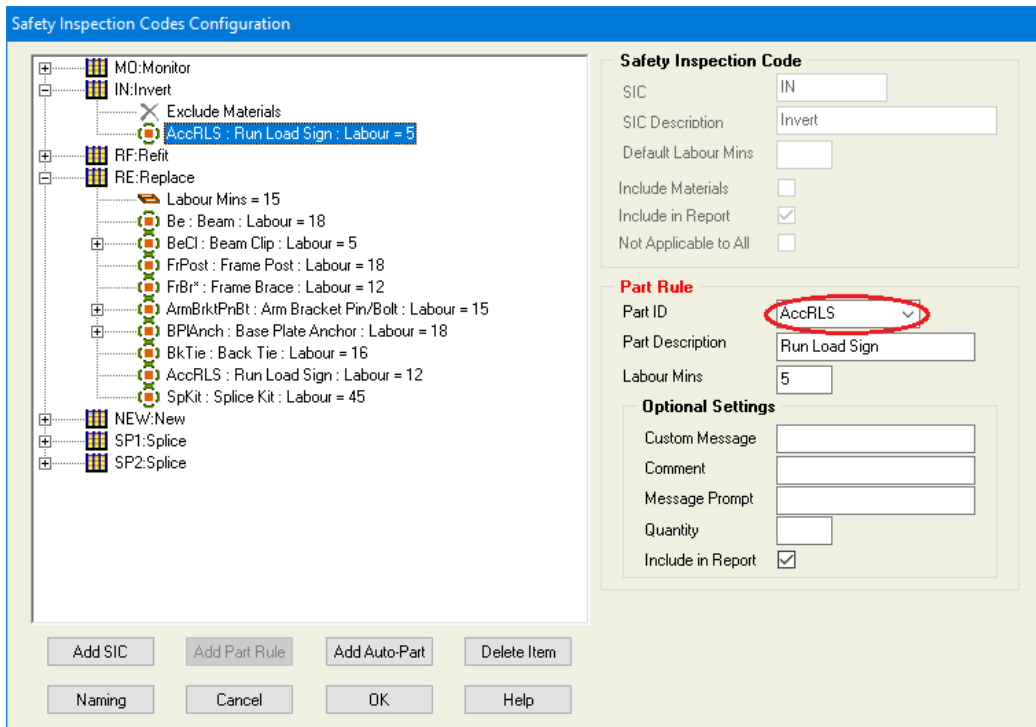

4. Implemented feature that lets user specify (via *System Options > General* tab) whether to keep updating standard defaults with the last entered values from *Toolbox* panels. That effectively enables user to choose whether to use (for new projects) either standard default values or the last entered values from *Toolbox* panels.

5. Resolved an issue of not showing the forklift in floor plan drawings, as per Top View.
6. Resolved an issue related to sometimes not drawing frames properly in floorplan and individual run drawings.
7. Resolved an issue related to adding a new SIC Part Rule in the '*Safety Inspection Codes Configuration*' dialog where the *Part ID* field was not being auto-populated with all the valid part names.
