

## GemRack Release Notes - V1.0 Build 1055

The main purpose of this release (on 06-Sep-2021) is to improve the overall program useability and resolve bugs.

If you have an active *Support Subscription* we encourage you to install this new release and take advantage of all the latest enhancements and corrections and if you have an expired *Support Subscription* and wish to renew it please contact our office.

This update is available by clicking the pop-up that appears at the bottom of the screen when opening **GemRack** or via the **Menu bar > Help >  Check for Updates** function and following the prompts.

The main changes for this release include:

- fixed several bugs related to validation of field values in the 'properties' dialog,
- fixed a bug related to the Run View feature,
- fixed a bug related to closing of projects,
- improved the way printer object is initialised at start up,
- fixed a bug related to adjustment of fractional values after having rotated objects,
- enhanced relevant functions to properly handle images with EXIF metadata, such as those taken with a mobile phone,
- fixed several bugs related to creation/adjustment of captions in Top View,
- fixed several bugs related to drag-points in Top View,

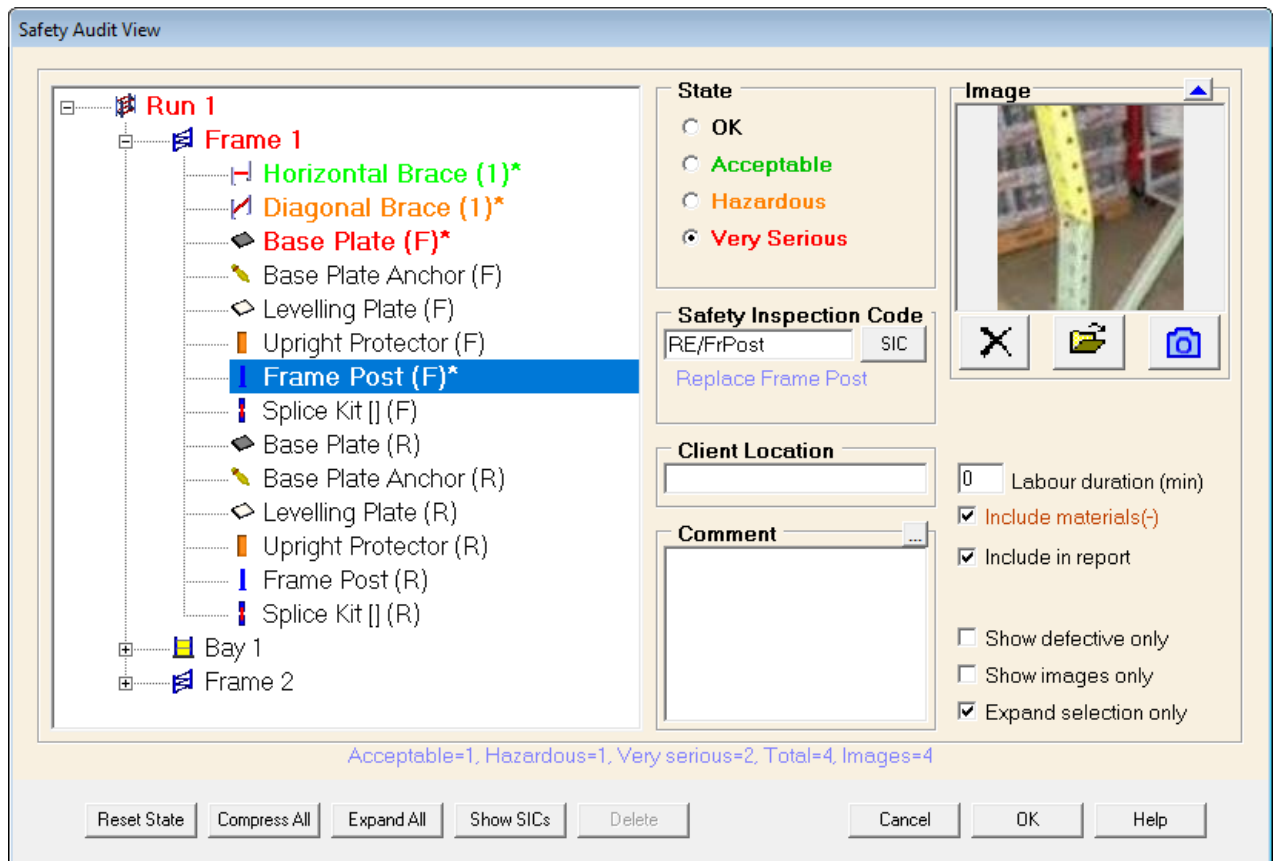

## New Features

None.

## Enhanced Features & Corrections

1. Fixed several bugs related to validation of fields in 'fixture properties' dialog, when under certain circumstances user enters non-numeric values.
2. Fixed a bug related to the Run View feature, after having made changes to multiple bays.
3. Fixed a bug related to removal of files from temporary folder that sometimes occurs when closing projects.

4. Improved the way printer object is initialised at start up so that it takes into account missing printer scenario as well as several other conditions.
5. Fixed a bug related to adjustment/rounding of values after having rotated objects with certain coordinate values.
6. Enhanced relevant functions to properly handle images with EXIF metadata, such as those taken with a mobile phone, that may be used in Safety Auditor, Word reports and company logo.

7. Fixed several bugs related to creation/adjustment of captions when creating long span racks.
8. Fixed several bugs related to drag-points in Top View that may sometimes occur following rotation of design area or individual objects,
9. Made some changes to underlying data in preparation for planned enhancements.
